

DEVICE FOR EXTRACTING A SUBSTANCE
FOR THE PREPARATION OF A DRINK

Abstract

5 The present invention relates to a device for extracting a substance for the
preparation of a drink. This device includes a first, fixed piece and a second piece that is
movable relative to the first about an axis of rotation lying at the rear of the two pieces, with
the front of each piece providing a cavity for the substance to be extracted. The device also
includes a system for closing and opening the two pieces. This system possesses a two-
10 armed closing lever and two traction rods. The two arms of the closing lever are arranged to
rotate about a first pivot on each side of the second piece. The traction rods are arranged to
rotate about a second pivot on each side of the first piece. The ends of the two arms of the
closing lever and the traction rods are fixed by means of a third, movable pivot so as to
15 interact mutually in order to cause the closing and opening of the device.
